SUBJECT Production and Research at the Siemens Plant in Arnstadt

INFO. [REDACTED]

DIST. X October 1947

PAGES 25X1A

SUPPLEMENT [REDACTED]

ORIGIN [REDACTED] 25X1A

25X1X

1. The former Siemens Insulator Works in Arnstadt (J25), now part of the Elektro-Kombinat of the Soviet AG, began producing radio receivers in the middle of 1946 and by July 1947 had an output of 3000 receivers a month. Until 20 July 1947, the receivers were accompanied with scales and instructions in Russian; since that date, about 1000 of the monthly production are provided with these accessories in Greek.
2. Not far from Arnstadt, and connected with the insulator plant, are the installations of the former Siemens television research center. This plant is also working, but the television department is kept strictly secret by the Russians, with the crew and employees completely isolated from outside contact. The workers include German laborers and Russian technicians, under the direction of sixteen German engineers. These latter officials are reported to send monthly food parcels and large sums of money to their relatives.
3. The director of the works is Dr. Friedel Rosemeyer, engineer. Until the beginning of 1944 he was Rottenführer in the SS Panzer Division Frundsberg. Thereafter, having been declared indispensable to war industry, he was entrusted with research in the field of infra-red radiation.
